Project Concept

1

Player Control

Warrior

You control a

top Down

in this

game

Keyboard input (WASD)

where

Move in 4 directions and interact with the world (NPCs, objects, enemies).

makes the player

2

Basic Gameplay

Enemies, NPCs, and obstacles

appear

During the game, from

Different zones of the map,

Complete quests, defeat enemies, and explore the environment to level up and progress through the story.

and the goal of the game is to

3

Sound & Effects

For attacks, footsteps, item pickups, end enemy interactions,

For magic, damage, and leveling up.

There will be sound effects and particle effects

Environmental background music and animated effects during cutscenes or transitions.

[optional/] There will also be

4

Gameplay Mechanics

The player unlocks new abilities and encounters stronger enemies,

More challenging and rewarding

As the game progresses, making it

An inventory system, a level-up system, and a quest tracker.

[optional/] There will also be

5

User Interface

Health bar and experience points

increase/decrease

The
will

The player takes damage or gains experience from defeating enemies.

whenever

The Hero's Journey

will appear

All the story-based quest are completed.

At the start of the game, the title

and the game will end when

This project includes a variety of features beyond basic movement and combat that enhance the RPG experience:

- **Quest System:** Accept, track, and complete multiple types of quest (collection, defeat enemies)
- **NPC dialogue system:** Dynamic conversations with branching paths and triggerbased interactions.
- **Experience and leveling system:** Gain XP from enemies and quest, level up to increase player stats.
- **Inventory system:** Pick up items and track them through an inventory UI.
- **Enemies AI:** Enemies can move randomly, detect player proximity, and attack
- **Sound and music management:** Background music, sound effects, and volume controls (FX/music/global).
- **Scene Transitions:** Smooth transitions between areas using triggers and DontDestroyOnLoad.
- **UI Manager:** Controls HUD elements like health bars, damage indicators, and text feedback.

Project Timeline

Milestone Description

#1	- Player movement, camera follow, and animations	08/8
	- Combat system and enemy AI	08/10
#2	- NPC interactions and quest system	08/12
	- Inventory, UI (HUD, health bar, XP)	08/14
#4	- Final polish: sound, VFX, bug fixes	08/16
	- Feature on backlog - not a part of the minimum viable product - Feature on backlog - not a part of the minimum viable product - Feature on backlog - not a part of the minimum viable product
